

Frequently Asked Questions

Find quick answers to common questions and concerns to help you navigate everything.

I'M NOT A TECHIE—CAN I STILL EARN FROM A CYBORG MINER?

Absolutely! Once it's plugged in, your Cyborg Miner starts earning—no coding, no tech skills, no fuss. It's as easy as setting up a WiFi router. Just power it up, connect, and let it do the work while you earn passively by supporting AI jobs.

WHY IS CYBORG NETWORK FASTER THAN THE CLOUD SOMETIMES?

Because our network brings computation closer to users. Instead of routing tasks to distant data centers, Cyborg Network finds nearby nodes—resulting in faster latency.

WHAT'S SPECIAL ABOUT CYBORG CONNECT?

It's not just another tool to run AI models. Cyborg Connect picks the smartest, most efficient spot on our global network to run your model—based on speed, cost, and availability. You just click "go" and it handles the rest.

Frequently Asked Questions

Find quick answers to common questions and concerns to help you navigate everything.

WHAT HAPPENS IF MY CYBORG MINER GOES OFFLINE?

Downtime is okay unless your miner is actively running a task. If it goes offline mid-task, it affects the network's reliability and leads to a penalty. We reward consistent performance, so miners that stay online and complete tasks on time earn more.

IS CYBORG JUST FOR DEVELOPERS AND BIG COMPANIES?

Not at all. While developers can deploy models, even individuals and small businesses can contribute to the network with Cyborg Miners, enabling a more democratic AI economy.

HOW DOES CYBORG ENSURE SAFETY AND COMPLIANCE?

We use trusted KYC, AML, and anti-fraud tools. On top of that, we fully comply with data privacy laws like GDPR—so your identity and data stay protected, always.

Frequently Asked Questions

Find quick answers to common questions and concerns to help you navigate everything.

CAN I TRUST CYBORG NETWORK WITH SENSITIVE AI WORK?

Yes. We're building a dedicated privacy layer for sensitive use cases like healthcare or government AI. With advanced encryption (like FHE) and secure hardware (like Nvidia Blackwell), your data stays locked tight—even while it's being used.

WHO ARE CYBORG TITANS?

They're the trailblazers powering Cyborg's global AI engine—running Cyborg Miners that make AI faster, safer, and more accessible. Titans don't just support the network—they lead a movement toward open, private, and borderless AI.

DO I HAVE TO USE ONLY CRYPTO TO DEPLOY MY AI APP ON CYBORG NETWORK?

Not at all. You can pay with either crypto or traditional fiat options—whichever works best for you. We're making AI accessible, no matter your preferred currency.
